

Recombinant Zika Virus NS1 Protein [His] (DAGA-038)

This product is for research use only and is not intended for diagnostic use.

PRODUCT INFORMATION

Product Overview	Zika Virus NS1 Recombinant Product contains Histidine tag. Reacts with both IgG and IgM. The NS-1 is a large, highly conserved protein.
Antigen Description	Zika virus is an emerging disease that is spread by Aedes mosquitoes. The virus was first isolated in Central Africa, and has since been spread to South Asia and recently to South America. Zika virus can cause mild fever, rash, myalgia, arthralgia and headaches, with one in four infected individuals being asymptomatic. Due to similar symptoms Zika virus infected individuals can easily be mis-diagnosed as a dengue infection and vice-versa. In addition, Zika virus has been implicated in causing microcephaly through transmission in utero.
Purity	≥ 85% Pure (SDS PAGE). Affinity Chromatography
Conjugate	His
Format	Purified, Liquid
Concentration	Batch dependent - please inquire should you have specific requirements.
Size	1 mg
Buffer	Phosphate Buffered Saline, pH 7.4
Preservative	0.09% Sodium Azide
Storage	Store at < -20°C, avoid repeated freeze/thaw cycles.

BACKGROUND

Keywords
