

Measles virus antigen (partially purified) (DAGA-497)

This product is for research use only and is not intended for diagnostic use.

PRODUCT INFORMATION

Antigen Description	The Measles virus is a highly contagious single-stranded RNA virus that is mostly spread via the respiratory system. It may be passed via aerosol droplets from coughs or through contact with infected bodily fluids. It causes measles, a disease characterised by fever, cough, runny nose, red eyes and a rash. Complications are more likely in adults.
Purity	Partially purified
Conjugate	Unconjugated
Format	Liquid
Concentration	Batch dependent - please inquire should you have specific requirements
Size	1 ml
Buffer	50mM Glycine, pH 9.0, ,0.1% CHAPS, ,0.01% SDS
Preservative	None
Storage	≤-70°C

BACKGROUND

Keywords morbilli; Measles virus; MeV; Measles virus Antigen
