Human EPM2AIP1 ELISA Matched Antibody Pair

REF ABPR-0302**RUO**

This product is for research use only and is not intended for diagnostic use.

For illustrative purposes only. To perform the assay the instructions for use provided with the kit have to be used.

PRODUCT INFORMATION

Intended Use

This antibody pair set comes with matched antibody pair to detect and quantify protein level of human EPM2AIP1.

General Description

The EPM2A gene, which encodes laforin, is mutated in an autosomal recessive form of adolescent progressive myoclonus epilepsy. The protein encoded by this gene binds to laforin, but its function is not known. This gene is intronless.

Reagents And Materials Provided

Antibody pair set content:

1. Capture antibody: mouse monoclonal anti-EPM2AIP1 (100 µg)
2. Detection antibody: rabbit purified polyclonal anti-EPM2AIP1 (50 µg)

Note: Reagents are sufficient for at least 3-5 x 96 well plates using recommended protocols.

Reconstitution And Storage

Store reagents of the antibody pair set at -20°C or lower. Please aliquot to avoid repeated freeze thaw cycle. Reagents should be returned to -20°C storage immediately after use.
