## BACKGROUND

**Introduction** This gene encodes a protein that contains several RNA-binding motifs, potential transmembrane domains, and proline-rich regions. This gene and the gene for copine I overlap at map location 20q11.21. Alternative splicing in the 5 UTR results in four transcript variants. All variants encode the same protein. **Keywords** RBM12; RNA binding motif protein 12; SWAN; HRIHFB2091; RNA-binding protein 12; RNA-binding motif protein 12; SH3/WW domain anchor protein in the nucleus;
