

Anti-FASL (C-terminal) polyclonal antibody (CABT-BL1497)

This product is for research use only and is not intended for diagnostic use.

PRODUCT INFORMATION

Immunogen	Synthetic peptide mapping to the C-terminus of rat FasL
Isotype	IgG
Source/Host	Rabbit
Species Reactivity	Rat
Purification	Affinity purified
Conjugate	Unconjugated
Applications	WB
Preservative	None
Storage	-20°C

BACKGROUND

Introduction	This gene is a member of the tumor necrosis factor superfamily. The primary function of the encoded transmembrane protein is the induction of apoptosis triggered by binding to FAS. The FAS/FASLG signaling pathway is essential for immune system regulation, including activation-induced cell death (AICD) of T cells and cytotoxic T lymphocyte induced cell death. It has also been implicated in the progression of several cancers. Defects in this gene may be related to some cases of systemic lupus erythematosus (SLE). Alternatively spliced transcript variants have been described. [provided by RefSeq, Nov 2014]
