

Anti-FOLR3 polyclonal antibody (CABT-BL1541)

This product is for research use only and is not intended for diagnostic use.

PRODUCT INFORMATION

Isotype	IgG
Source/Host	Sheep
Species Reactivity	Human
Conjugate	Unconjugated
Applications	FC, WB
Preservative	None
Storage	-20°C, Avoid freeze/thaw

BACKGROUND

Introduction

This gene encodes a member of the folate receptor (FOLR) family, members of which have a high affinity for folic acid and for several reduced folic acid derivatives, and mediate delivery of 5-methyltetrahydrofolate to the interior of cells. This gene includes two polymorphic variants; the shorter one has two base deletion in the CDS, resulting in a truncated polypeptide, compared to the longer one. Both protein products are constitutively secreted in hematopoietic tissues and are potential serum marker for certain hematopoietic malignancies. The longer protein has a 71% and 79% sequence homology with the FOLR1 and FOLR2 proteins, respectively. [provided by RefSeq, Jul 2008]
