

Anti-MAP2 (aa 2-309) polyclonal antibody (CABT-BL2280)

This product is for research use only and is not intended for diagnostic use.

PRODUCT INFORMATION

Immunogen	Recombinant mouse MAP 2 (aa 2 - 309).
Source/Host	Pig
Species Reactivity	Mouse
Conjugate	Unconjugated
Applications	WB, ICC, IHC
Preservative	None
Storage	-20°C, Avoid freeze / thaw cycles

BACKGROUND

Introduction	Microtubule-associated protein 2 is a protein that in humans is encoded by the MAP2 gene. This gene encodes a protein that belongs to the microtubule-associated protein family. The proteins of this family are thought to be involved in microtubule assembly, which is an essential step in neurogenesis. MAP2 serves to stabilize microtubules (MT) growth by crosslinking MT with intermediate filaments and other MT. The products of similar genes in rat and Mouse are neuron-specific cytoskeletal proteins that are enriched in dendrites, implicating a role in determining and stabilizing dendritic shape during neuron development. A number of alternatively spliced variants encoding distinct isoforms have been described.
