BACKGROUND

Introduction	This gene encodes a member of the WD repeat protein family. WD repeats are minimally conserved regions of approximately 40 amino acids typically bracketed by gly-his and trp-aspartate (GH-WD), which may facilitate formation of heterotrimeric or multiprotein complexes. Members of this family are involved in a variety of cellular processes, including cell cycle progression,

signal transduction, apoptosis, and gene regulation. Two transcript variants encoding two different isoforms have been found for this gene.
