

Anti-EHV-1 polyclonal antibody (CABT-BL8945)

This product is for research use only and is not intended for diagnostic use.

PRODUCT INFORMATION

Immunogen	Equine Herpesvirus Type 1
Isotype	IgG
Source/Host	Goat
Species Reactivity	Equine herpesvirus 1
Conjugate	Unconjugated
Applications	IFA
Size	2 ml
Preservative	None
Storage	Store at 2-7 °C. Do not freeze!

BACKGROUND

Introduction	Equine herpesvirus 1 (EHV-1) is a virus of the family Herpesviridae that causes abortion, respiratory disease and occasionally neonatal mortality in horses. Initial spread of EHV-1 by a newly introduced horse through direct and indirect contact can lead to abortion and perinatal infection in up to 70 percent of a previously unexposed herd. Abortion usually occurs in the last four months of gestation, two to four weeks after infection of the mare. Perinatal (around the time of birth) infection can lead to pneumonia and death. Encephalitis can occur in affected animals, leading to ataxia, paralysis, and death.
