

# Anti-Human IAV H1N1/H3N2 chimeric monoclonal antibody, clone S6D0 (CABT-L2450)

This product is for research use only and is not intended for diagnostic use.

## PRODUCT INFORMATION

### Product Overview

It is a Mouse/Human chimeric monoclonal antibody produced in transgenic mice by replacing the mouse sequence of the heavy chain constant region (IgM, IgG or IgA loci) by the corresponding human sequence. After immunization with the antigen of interest, generated antibody clones are cultivated by standard hybridoma techniques. They consist of the human constant region of the heavy chain, mouse variable region of the heavy chain and mouse light chain. The human constant region of the heavy chain can be directly recognized by the anti-human conjugate, which is used in numerous in vitro diagnostic assays.

|                           |                                                                                         |
|---------------------------|-----------------------------------------------------------------------------------------|
| <b>Specificity</b>        | This antibody directed against influenza A                                              |
| <b>Target</b>             | Human IAV H1N1/H3N2 protein                                                             |
| <b>Isotype</b>            | IgM                                                                                     |
| <b>Source/Host</b>        | Mouse                                                                                   |
| <b>Species Reactivity</b> | Virus                                                                                   |
| <b>Clone</b>              | S6D0                                                                                    |
| <b>Purification</b>       | Unpurified                                                                              |
| <b>Conjugate</b>          | Unconjugated                                                                            |
| <b>Applications</b>       | ELISA                                                                                   |
| <b>Format</b>             | Liquid                                                                                  |
| <b>Buffer</b>             | Supplied in IMDM, 10% fetal bovine serum (FBS), 1% penicillin – streptomycin, 1% sodium |

pyruvate, 1% non essential aminoacids, 50 µM β mercaptoethanol

## BACKGROUND

|                     |                                                                                                                                                                                                                                      |
|---------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Introduction</b> | Influenza A virus is a major public health threat. Novel influenza virus strains caused by genetic drift and viral recombination emerge periodically to which humans have little or no immunity, resulting in devastating pandemics. |
