

# Rabbit Anti-H5N3 HA Polyclonal Antibody (CABT-YN1020)

This product is for research use only and is not intended for diagnostic use.

## PRODUCT INFORMATION

Target     H5N3 HA       Immunogen     H5N3 HA. Recombinant protein encompassing a sequence within the N-terminus region of Avian Influenza A virus H5N3 HA (Hemagglutinin) (A/mallard/Miyagi/53/1976(H5N3)). The exact sequence is proprietary.       Isotype     IgG       Source/Host     Rabbit       Species Reactivity     IAV       Purification     Antigen Affinity Purification       Conjugate     unconjugated       Applications     WB       Format     Liquid       Size     100 µl       Buffer     20% Glycerol, PBS, pH7.0       Preservative     0.01% Thimerosal       Storage     Store as concentrated solution. Centrifuge briefly prior to opening vial. For short-term storage (1-2 weeks), store at 4°C. For long-term storage, aliquot and store at -20°C or below. Avoid multiple freeze-thaw cycles. ### **BACKGROUND**

#### Introduction

Hemagglutinin (HA) is a viral coat protein that is responsible for the binding of IAV to target cells and the subsequent fusion of the viral and cellular membranes. HA binds to sialic acid-containing receptors on the cell surface, bringing about the attachment of the virus particle to the cell. This attachment induces virion internalization of about two third of the virus particles through clathrin-dependent endocytosis and about one third through a clathrin- and caveolin-independent pathway. Plays a major role in the determination of host range restriction and virulence. Responsible for penetration of the virus into the cell cytoplasm by mediating the fusion of the membrane of the endocytosed virus particle with the endosomal membrane. Low pH in endosomes induces an irreversible conformational change in HA2, releasing the fusion hydrophobic peptide. Several trimers are required to form a competent fusion pore.
