

Mouse Anti-Horse IFN- γ monoclonal antibody, clone 3 (CABT-ZB097)

This product is for research use only and is not intended for diagnostic use.

PRODUCT INFORMATION

Target	IFN- γ
Isotype	IgG1
Source/Host	Mouse
Species Reactivity	Horse
Clone	3
Conjugate	Unconjugated
Applications	ELISA, FACS, staining IFN- γ -producing equine cells
Buffer	PBS
Preservative	Sodium azide
Storage	Long time storage is recommended at -20°C.
Ship	Wet ice

BACKGROUND

Introduction	Interferon gamma (IFN- γ) is a dimerized soluble cytokine that is the only member of the type II class of interferons. The existence of this interferon, which early in its history was known as immune interferon, was described by E. F. Wheelock as a product of human leukocytes stimulated with phytohemagglutinin, and by others as a product of antigen-stimulated lymphocytes.
