

Human DIABLO blocking peptide (CDBP2731)

This product is for research use only and is not intended for diagnostic use.

PRODUCT INFORMATION

Product Overview	Smac (C - term) peptide (mouse)
Antigen Description	This gene encodes an inhibitor of apoptosis protein (IAP)-binding protein. The encoded mitochondrial protein enters the cytosol when cells undergo apoptosis, and allows activation of caspases by binding to inhibitor of apoptosis proteins. Overexpression of the encoded protein sensitizes tumor cells to apoptosis. A mutation in this gene is associated with young-adult onset of nonsyndromic deafness-64. Alternative splicing results in multiple transcript variants encoding different isoforms. (provided by RefSeq, May 2013)
