PRODUCT INFORMATION

|---------------------|--|
| Product Overview | Blocking/Immunizing peptide for anti-TPD52L3/D55 antibody |
| Antigen Description | This gene encodes a member of the tumor protein D52-like family of proteins. These proteins are characterized by an N-terminal coiled-coil motif that is used to form homo- and heteromeric complexes with other tumor protein D52-like proteins. The encoded protein may play a role in spermatogenesis. Alternative splicing results in multiple transcript variants. [provided by RefSeq, Oct 2009] |
