

APH1A blocking peptide (CDBP5086)

This product is for research use only and is not intended for diagnostic use.

PRODUCT INFORMATION

Antigen Description

This gene encodes a component of the gamma secretase complex that cleaves integral membrane proteins such as Notch receptors and beta-amyloid precursor protein. The gamma secretase complex contains this gene product, or the paralogous anterior pharynx defective 1 homolog B (APH1B), along with the presenilin, nicastrin, and presenilin enhancer-2 proteins. The precise function of this seven-transmembrane-domain protein is unknown though it is suspected of facilitating the association of nicastrin and presenilin in the gamma secretase complex as well as interacting with substrates of the gamma secretase complex prior to their proteolytic processing. Polymorphisms in a promoter region of this gene have been associated with an increased risk for developing sporadic Alzheimer's disease. Alternative splicing results in multiple protein-coding and non-protein-coding transcript variants. [provided by RefSeq, Aug 2011]

Conjugate Unconjugated

Applications Used as a blocking peptide in immunoblotting applications.

Format Liquid

Concentration 200 µg/mL

Size 0.05 mg

Preservative None

Storage -20°C

GENE INFORMATION

Gene Name [APH1A APH1A gamma secretase subunit \[Homo sapiens \(human\) \]](#)

Official Symbol APH1A

Synonyms	APH1A; APH1A gamma secretase subunit; APH-1; APH-1A; CGI-78; 6530402N02Rik; gamma-secretase subunit APH-1A; aph-1alpha; presenilin-stabilization factor; anterior pharynx defective 1 homolog A
Entrez Gene ID	51107
mRNA Refseq	NM_001077628
Protein Refseq	NP_001071096
UniProt ID	Q96BI3
Pathway	Activated NOTCH1 Transmits Signal to the Nucleus; Alzheimer's disease; Alzheimers Disease; Axon guidance; Cell death signalling via NRAGE; Constitutive Signaling by NOTCH1 HD+PEST Domain Mutants; Constitutive Signaling by NOTCH1 PEST Domain Mutants; Delta-Notch Signaling Pathway
Function	endopeptidase activity; protein binding
