

TINCR blocking peptide (CDBP5930)

This product is for research use only and is not intended for diagnostic use.

PRODUCT INFORMATION

Antigen Description	This locus is inferred to be non-protein-coding based on the observations that a) there is no homology support for predicted open reading frames; and b) the location of the longer predicted open reading frame renders the transcript a candidate for nonsense-mediated decay (NMD) as the stop codon is > 50 nucleotides upstream of the terminal splice site.
