

Native *Neisseria gonorrhoeae* Unassayed Control (DAG-P2203)

This product is for research use only and is not intended for diagnostic use.

PRODUCT INFORMATION

Species *Neisseria gonorrhoeae*

Conjugate N/A

Applications Immunoassays

Format Liquid

Size 1 mL

Buffer 10 mM PBS, pH 7.4

Storage Store at -20°C

BACKGROUND

Introduction *Neisseria gonorrhoeae*, also known as gonococcus (singular) or gonococci (plural), is a species of Gram-negative diplococci bacteria first isolated by Albert Neisser in 1879. An obligate human pathogen, it primarily colonizes the mucosal lining of the urogenital tract; however, it is also capable of adhering to the mucosa of the nose, pharynx, rectum, and conjunctiva. It causes the sexually transmitted genitourinary infection gonorrhea as well as other forms of gonococcal disease including disseminated gonococcemia, septic arthritis, and gonococcal ophthalmia neonatorum.
