

# Recombinant HCV type 1 Active Nonstructural Protein 4 (DAG-P2769)

This product is for research use only and is not intended for diagnostic use.

## PRODUCT INFORMATION

<b>Product Overview</b>	Active hepatitis c virus Hepatitis C Virus Genotype 1 NS4 protein fragment
<b>Antigen Description</b>	NS4 A/B are two of the seven nonstructural (NS) proteins making up the HCV polyprotein. The NS proteins recruit the viral genome into an RNA replication complex, which is associated with rearranged cytoplasmic membranes. NS4A acts as a cofactor with the NS3 serine protease and stabilizes its folding. The NS3-NS4A complex is essential for the activation of the latter and allows membrane anchorage of NS3. HCV is a positive, single-stranded RNA virus in the Flaviviridae family. The genome is approximately 10,000 nucleotides and encodes a single polyprotein of about 3,000 amino acids. The hepatitis C virus (HCV) nonstructural protein 4B (NS4B) is a relatively hydrophobic 27-kDa protein. The 4A protein has a molecular weight of 6 kDa.
<b>Species</b>	HCV
<b>Purity</b>	> 95 % by SDS-PAGE. This antigen is purified by a proprietary chromatographic technique.
<b>Conjugate</b>	Unconjugated
<b>Applications</b>	WB ELISA
<b>Bio-activity</b>	This protein is immunoreactive with sera of HCV-infected individuals.
<b>Format</b>	Liquid
<b>Buffer</b>	pH: 8.00 Constituents: 9% Urea, 0.395% Tris HCl, 0.0292% EDTA, 50% Glycerol
<b>Preservative</b>	None
<b>Storage</b>	Shipped at 4°C. Upon delivery aliquot and store at -20°C. Avoid freeze/thaw cycles.

# BACKGROUND

Introduction	Hepatitis C Virus is a positive, single stranded RNA virus in the Flaviviridae family. The genome is approximately 10,000 nucleotides and encodes a single polyprotein of about 3,000 amino acids. The polyprotein is processed by host cell and viral protease
