

Recombinant Human VEGFA Protein [hFc] (DAG-WT1117)

This product is for research use only and is not intended for diagnostic use.

PRODUCT INFORMATION

Purity	> 95 % as determined by SDS-PAGE
Conjugate	hFc
Applications	Immunoassays
Molecular Weight	90.12 kDa
Format	Liquid
Concentration	Batch dependent - please inquire should you have specific requirements
Size	1 mg
Buffer	Phosphate buffered saline, 5% mannitol, 0.05% Tween20, pH7.4
Preservative	None
Storage	Store at -20°C to -80°C

BACKGROUND

Introduction	Vascular endothelial growth factor A (VEGF-A) is a dimeric glycoprotein that plays a significant role in neurons and is considered to be the main, dominant inducer to the growth of blood vessels. VEGFA is essential for adults during organ remodeling and diseases that involve blood vessels, for example, in wound healing, tumor angiogenesis, diabetic retinopathy, and age-related macular degeneration. During early vertebrate development, vasculogenesis occurs which means that the endothelial condense into the blood vessels.
