

# Recombinant Canine adenovirus type 2 (CAV-2) N protein (DAG-WT1340)

This product is for research use only and is not intended for diagnostic use.

## PRODUCT INFORMATION

<b>Species</b>	Canine
<b>Purity</b>	> 90% as determined by SDS-PAGE
<b>Conjugate</b>	His
<b>Applications</b>	ELISA, LFIA
<b>Stability</b>	≥ 12 months
<b>Format</b>	Liquid
<b>Size</b>	0.5mg, 1 mg
<b>Buffer</b>	Tris-glycine buffer
<b>Preservative</b>	None
<b>Storage</b>	Store at -20°C

## BACKGROUND

<b>Introduction</b>	Canine adenovirus type 2 (CAV-2) causes respiratory disease in dogs and is one of the infectious agents commonly associated with canine infectious tracheobronchitis, which is also known as kennel cough. Canine infectious tracheobronchitis is usually spread from dog to dog through coughing. Dogs that are around other dogs, such as at boarding facilities, grooming salons, or dog parks, are at increased risk for exposure.
<b>Keywords</b>	Canine adenovirus type 2; CAV-2
