

# Recombinant Human Serum Albumin (DAG-WT1770)

This product is for research use only and is not intended for diagnostic use.

## PRODUCT INFORMATION

|                  |                                 |
|------------------|---------------------------------|
| Species          | Human                           |
| Purity           | > 98% as determined by SDS-PAGE |
| Conjugate        | N/A                             |
| Applications     | Cell culture                    |
| Molecular Weight | 66.5 kDa                        |
| Format           | Lyophilized                     |
| Size             | 1 g                             |
| Preservative     | None                            |
| Storage          | Store at 2°C to 8°C             |

## BACKGROUND

|              |   |
|--------------|---|
| Introduction | As the most abundant protein in human plasma, human serum albumin (HSA) is the transporter of hormones, lipids and other substances. Its main physiological function is to regulate plasma pH and maintain plasma osmotic pressure. |
| Keywords     | Human serum albumin; HSA  |
