

# Inactivated Human Adenovirus 32 Culture Fluid (DAG-WT1971)

This product is for research use only and is not intended for diagnostic use.

## PRODUCT INFORMATION

|              |                                    |
|--------------|------------------------------------|
| Conjugate    | N/A                                |
| Applications | Control                            |
| Bio-activity | $\geq 10^5$ TCID <sub>50</sub> /mL |
| Format       | Liquid                             |
| Size         | 1 mL                               |
| Buffer       | DMEM                               |
| Preservative | None                               |
| Storage      | Store at -20°C                     |

## BACKGROUND

|              |                                                                                                                                                                                                                                                                                                    |
|--------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Introduction | Adenoviruses most commonly cause respiratory illness. The illnesses can range from the common cold to pneumonia, croup, and bronchitis. Depending on the type, adenoviruses can cause other illnesses such as gastroenteritis, conjunctivitis, cystitis, and, less commonly, neurological disease. |
| Keywords     | Adenovirus; ADV; ADV32                                                                                                                                                                                                                                                                             |
