

Recombinant RABV Glycoprotein [His] (DAG-WT2200)

This product is for research use only and is not intended for diagnostic use.

PRODUCT INFORMATION

Purity	> 95% as determined by SDS-PAGE
---------------	---------------------------------

Conjugate	His
------------------	-----

Applications	Immunoassays
---------------------	--------------

Molecular Weight	48.9 kDa
-------------------------	----------

Format	Liquid
---------------	--------

Size	50 µg, 500 µg, 1 mg
-------------	---------------------

Buffer	PBS, pH 7.4
---------------	-------------

Preservative	None
---------------------	------

Storage	Store at -20°C
----------------	----------------

BACKGROUND

Introduction	Rabies virus, scientific name Rabies lyssavirus, is a neurotropic virus that causes rabies in animals, including humans. Rabies transmission can occur through the saliva of animals and less commonly through contact with human saliva. Rabies lyssavirus, like many rhabdoviruses, has an extremely wide host range. In the wild it has been found infecting many mammalian species, while in the laboratory it has been found that birds can be infected, as well as cell cultures from mammals, birds, reptiles and insects.
