

Recombinant Sudan Virus (SUDV) VLP (DAG-WT375)

This product is for research use only and is not intended for diagnostic use.

PRODUCT INFORMATION

Product Overview	Virus-like Particles expressing recombinant Sudan virus (SUDV) glycoprotein (GP), nucleoprotein (NP), and matrix protein (VP40). These VLP's are produced in Sf9 insect cells through infection with a recombinant baculovirus
Conjugate	Unconjugated
Applications	WB
Format	Liquid
Concentration	Batch dependent - please inquire should you have specific requirements
Size	1 mg
Buffer	PBS with glycerol, arginine
Preservative	None
Storage	Store at -20°C to -80°C

BACKGROUND

Introduction	Sudan virus (SUDV) is one of six known viruses within the genus Ebolavirus and one of the four that causes Ebola virus disease (EVD) in humans and other primates; it is the sole member of the species Sudan ebolavirus.
Keywords	Sudan virus; Ebolavirus; VLP
