

## Native *B. abortus* LPS Antigen (DAG-WT670)

This product is for research use only and is not intended for diagnostic use.

### PRODUCT INFORMATION

Purity	>95%
Conjugate	N/A
Applications	ELISA
Format	Liquid
Size	1 mg
Buffer	50mM Carbonate-bicarbonate buffer, pH9.6
Preservative	None
Storage	Store at 2-8°C

### BACKGROUND

Introduction	Brucellosis is an infectious disease caused by small ellipsoid, gram-negative bacteria. There are four different germs: <i>Br. abortus</i> , <i>Br. melitensis</i> , <i>Br. suis</i> and <i>Br. canis</i> . People are infected by contact with infected animals or by eating meat or drinking unpasteurized milk from infected animals. As a rule, infected humans are not contagious. Brucellosis is most frequent in young and middleaged individuals.
