

Native Porcine *Trichinella spiralis* (DAG-WT809)

This product is for research use only and is not intended for diagnostic use.

PRODUCT INFORMATION

Product Overview	Soluble somatic protein and ES fraction purified and concentrated from <i>T. spiralis</i> larvae
Purity	> 95 % as determined by SDS-PAGE
Conjugate	N/A
Format	Liquid
Concentration	Batch dependent - please inquire should you have specific requirements
Size	1 mg
Buffer	0.1 M Tris buffer, pH 4.0
Preservative	0.1% NaN ₃
Storage	Store at 2°C to 8°C

BACKGROUND

Introduction	<p><i>Trichinella spiralis</i> is a viviparous nematode parasite, occurring in rodents, pigs, bears, hyenas and humans, and is responsible for the disease trichinosis. It is sometimes referred to as the "pork worm" due to it being typically encountered in undercooked pork products. It should not be confused with the distantly related pork tapeworm.</p>
Keywords	<p><i>Trichinella spiralis</i>; <i>T. spiralis</i>; <i>Trichinella</i>; Nematode parasite</p>
