

# Rabbit Control Serum (DAG123)

This product is for research use only and is not intended for diagnostic use.

## PRODUCT INFORMATION

<b>Product Overview</b>	Rabbit control serum (Cytochrome p450 assays)
<b>Specificity</b>	Rabbit control serum is a control serum for use in cytochrome p450 inhibition assays. Rabbit control serum does not recognise human cytochrome p450's by western blotting and does not inhibit human cytochrome p450 catalytic activity.
<b>Species</b>	Rabbit
<b>Conjugate</b>	Unconjugated
<b>Format</b>	serum-liquid
<b>Preservative</b>	None
<b>Storage</b>	2-8°C short term, -20°C long term

## BACKGROUND

<b>Introduction</b>	In blood, the serum is the component that is neither a blood cell (serum does not contain white or red blood cells) nor a clotting factor; it is the blood plasma not including the fibrinogens. Serum includes all proteins not used in blood clotting (coagulation) and all the electrolytes, antibodies, antigens, hormones, and any exogenous substances (e.g., drugs and microorganisms). A study of serum is serology, and may also include proteomics. Serum is used in numerous diagnostic tests, as well as blood typing.
