

# Biotinylated Recombinant SIV gp140 (smE660) (a.a. 18-700) [His] (DAG1978)

This product is for research use only and is not intended for diagnostic use.

## PRODUCT INFORMATION

|                         |  |
|-------------------------|--|
| <b>Product Overview</b> | Biotin labeled C-terminal 6xHis tagged gp140 (HIV-1/Clade B/C(CN54)) protein   |
| <b>Species</b>          | SIV  |
| <b>Purity</b>           | ≥95%   |
| <b>Conjugate</b>        | His  |
| <b>Applications</b>     | antibody ELISA, protein labeling, etc  |
| <b>Format</b>           | Liquid   |
| <b>Concentration</b>    | 0.5 mg/ml  |
| <b>Size</b>             | 50 µg  |
| <b>Buffer</b>           | PBS with 40% glycerol  |
| <b>Preservative</b>     | None   |
| <b>Storage</b>          | After reconstitution, stable for a month at 4°C. For long term storage, split it into small aliquots and keep at -80°C. Avoid repeated freezing and thawing. |

## BACKGROUND

|                     |  |
|---------------------|--|
| <b>Introduction</b> | The HIV-1 envelope (Env) glycoproteins play an essential role in the virus replication cycle by mediating the fusion between viral and cellular membranes during the entry process. The Env glycoproteins are synthesized as a polyprotein precursor, gp160, that is cleaved by cellular proteases to the mature surface glycoprotein gp120 and the transmembrane glycoprotein gp41. |
|---------------------|--|

During virus assembly the gp120/gp41 complex is incorporated as heterotrimeric spikes into the lipid bilayer of nascent virions.
