

Recombinant HIV type 1 gp140 (Consensus) (a.a. 30-667) [His] (DAG2133)

This product is for research use only and is not intended for diagnostic use.

PRODUCT INFORMATION

Product Overview	C-terminal 6xHis tagged gp140 (HIV-1/Clade AE)(Consensus) protein (http://www.hiv.lanl.gov/cgi-bin/NEWALIGN/align.cgi) (a.a. 30-667). It has 98% homology to a circulating strain
Species	HIV
Purity	≥ 95%
Conjugate	His
Applications	WB standard, antibody ELISA, immunogen, etc
Format	Liquid
Concentration	1 mg/ml
Size	100 µg, 1 mg
Buffer	PBS
Preservative	None
Storage	Stable for a month at 4°C. For long term storage, split it into small aliquots and keep at -80°C. Avoid repeated freezing and thawing.

BACKGROUND

Introduction	The HIV-1 envelope (Env) glycoproteins play an essential role in the virus replication cycle by mediating the fusion between viral and cellular membranes during the entry process. The Env
---------------------	---

glycoproteins are synthesized as a polyprotein precursor, gp160, that is cleaved by cellular proteases to the mature surface glycoprotein gp120 and the transmembrane glycoprotein gp41. During virus assembly the gp120/gp41 complex is incorporated as heterotrimeric spikes into the lipid bilayer of nascent virions.
