

Lysergic acid diethylamide (LSD) [BSA] (DAG3104)

This product is for research use only and is not intended for diagnostic use.

PRODUCT INFORMATION

Product Overview	Lysergic acid diethylamide, BSA-Conjugated
Species	N/A
Conjugate	BSA
Applications	immunogen
Format	Liquid
Concentration	6.95 mg/mL
Size	1 mg
Buffer	Supplied in distilled water
Preservative	None
Storage	2-8°C short term, -20°C long term

BACKGROUND

Introduction	Lysergic acid diethylamide is an ergoline alkaloid arising from formal condensation of lysergic acid with diethylamine. It has a role as a hallucinogen, a serotonergic agonist and a dopamine agonist. It is an ergoline alkaloid, an organic heterotetracyclic compound and a monocarboxylic acid amide. It derives from a lysergamide.
