

# Recombinant DENV type 2 NS1n [GST] (DAG3285)

This product is for research use only and is not intended for diagnostic use.

## PRODUCT INFORMATION

<b>Product Overview</b>	Recombinant Dengue-2 Virus NS1n
<b>Specificity</b>	The E. coli derived recombinant protein contains the NS1 dengue virus type-2 N-terminal immunodominant regions. The dengue protein is fused to a GST tag. It is purified by proprietary chromatographic technique. The protein is >95% pure as determined by SD
<b>Species</b>	DENV
<b>Conjugate</b>	GST
<b>Preservative</b>	None
<b>Storage</b>	2-8°C short term, -20°C long term

## BACKGROUND

<b>Introduction</b>	Dengue virus (DENV) in one of four serotypes is the cause of dengue fever. It is a mosquito-borne single positive-stranded RNA virus of the family Flaviviridae; genus Flavivirus. All four serotypes can cause the full spectrum of disease. Its genome is about 11000 bases that codes for three structural proteins, capsid protein C, membrane protein M, envelope protein E; seven nonstructural proteins, NS1, NS2a, NS2b, NS3, NS4a, NS4b, NS5; and short non-coding regions on both the 5 and 3 ends. Further classification of each serotype into genotypes often relates to the region where particular strains are commonly found or were first found.
<b>Keywords</b>	Dengue Virus 1+2+3+4; Dengue Virus Type 1, 2, 3, 4; Group IV; Flaviviridae; Flavivirus; Dengue virus; Dengue Virus; DENV
