

Pyridine-2-carboxylic Acid [BSA] (DAG3393)

This product is for research use only and is not intended for diagnostic use.

PRODUCT INFORMATION

Conjugate	BSA
Applications	ELISA, LFIA
Format	Liquid
Concentration	Batch dependent - please inquire should you have specific requirements
Size	1 mg
Buffer	10mM PBS, pH 7.4
Preservative	None
Storage	Store at -20°C

BACKGROUND

Introduction	Pyridine-2-carboxylic Acid is an aromatic heterocyclic carboxylic acid used as a ligand, intermediate, and precursor in pharmaceutical and agrochemical synthesis. Its electron-deficient pyridine ring supports metal coordination and nucleophilic substitution reactions. It is widely used in studying heterocycle reactivity and chelation chemistry.
Keywords	Pyridine-2-carboxylic Acid; Picolinic Acid
