

Recombinant HCV type 1b Nonstructural Protein 5 (a.a. 2212-2313) [GST] (DAG3507)

This product is for research use only and is not intended for diagnostic use.

PRODUCT INFORMATION

Product Overview	Recombinant Hepatitis C Virus NS5 Genotype 1b (a.a. 2212-2313), GST-tagged
Antigen Description	NS5A is a ~56 kDa pleiotropic protein with key roles in both viral RNA replication and modulation of the physiology of the host cell. Its exact role is not currently known (2008). NS5B (non-structural protein 5B) is an RNA-dependant RNA polymerase respon
Specificity	Immunoreactive with sera of HCV-infected individuals.
Species	HCV
Purity	HCV NS5 Genotype-1a protein is > 95% pure as determined by 10% PAGE (coomassie staining)
Conjugate	GST
Applications	HCV NS5 Genotype-1a antigen is suitable for ELISA and Western blots, excellent antigen for detection of HCV with minimal specificity problems.
Preservative	None
Storage	2-8°C short term, -20°C long term

BACKGROUND

Introduction	Hepatitis C Virus is a positive, single stranded RNA virus in the Flaviviridae family. The genome is approximately 10, 000 nucleotides and encodes a single polyprotein of about 3, 000 amino acids. The polyprotein is processed by host cell and viral proteases into three major structural proteins and several non structural proteins necessary for viral replication. Several different genotypes of HCV with slightly different genomic sequences have since been identified that
--------------	---

correlate with differences in response to treatment with interferon alpha.
