

Chicken Sternum Proteoglycans (DAG4638)

This product is for research use only and is not intended for diagnostic use.

PRODUCT INFORMATION

Product Overview	Chicken Sternum Proteoglycans
Species	Chicken
Conjugate	Unconjugated
Applications	immunogen
Format	Lyophilized, white - hygroscopic
Preservative	None
Storage	2-8°C short term, -20°C long term

BACKGROUND

Introduction	There are two types of canine parvovirus called canine minute virus (CPV1) and CPV2. Canine minute virus is a type of virus of the family Parvoviridae that infects dogs. It is most similar to bovine parvovirus in its protein structure and DNA. CCV was discovered in 1971 in Germany during an outbreak in sentry dogs. The virus invades and replicates in the villi of the small intestine. Giardia is a genus of anaerobic flagellated protozoan parasites of the phylum Diplomonada in the supergroup "Excavata" that colonise and reproduce in the small intestines of several vertebrates, causing giardiasis.
Keywords	Canine Parvovirus-Canine Corona Virus-Giardia; CPV-CCV-Giardia
