

Recombinant DENV type 1 Envelope Protein [His] (DAG476)

This product is for research use only and is not intended for diagnostic use.

PRODUCT INFORMATION

| | |
|-------------------------|--|
| Product Overview | Recombinant Dengue Type-1 Envelope, immunodominant region. This region also contains a common antigen for Dengue type 2, 3 and 4. Contains a 6-His fusion partner, was expressed in Ecoli. Strong reactivity with Dengue IgG. Good reactivity with Dengue IgM. |
| Species | DENV |
| Purity | > 95% pure (10% PAGE (Coomassie)). Proprietary chromatographic technique |
| Conjugate | His |
| Applications | Suitable for use in ELISA, Lateral flow and Colloidal gold conjugation. Each laboratory should determine an optimum working titer for use in its particular application. Other applications have not been tested but use in such assays should not necessarily |
| Format | Purified, Liquid |
| Concentration | 0.82 mg/ml |
| Size | 1 mg |
| Buffer | PBS, pH 7.4 |
| Preservative | None |
| Storage | 2-8°C short term, -20°C long term |

BACKGROUND

Introduction Dengue virus (DENV) in one of four serotypes is the cause of dengue fever. It is a mosquito-

borne single positive-stranded RNA virus of the family Flaviviridae; genus Flavivirus. All four serotypes can cause the full spectrum of disease. Its genome is about 11000 bases that codes for three structural proteins, capsid protein C, membrane protein M, envelope protein E; seven nonstructural proteins, NS1, NS2a, NS2b, NS3, NS4a, NS4b, NS5; and short non-coding regions on both the 5' and 3' ends. Further classification of each serotype into genotypes often relates to the region where particular strains are commonly found or were first found.
