

Androstenedione [HRP] (DAGA-133H)

This product is for research use only and is not intended for diagnostic use.

PRODUCT INFORMATION

Antigen Description In addition to its role as a precursor to testosterone in the body, androstenedione has androgenic properties in its own right, acting as a weak partial agonist of the androgen receptor. However, in the presence of full agonists like testosterone or dihydrotestosterone (DHT), due to its lower intrinsic activity in comparison, it has antagonistic properties, and can behave more like an antiandrogen like cyproterone.

Conjugate HRP

Applications ELISA

Format Liquid

Concentration Batch dependent - please inquire should you have specific requirements.

Size 1 mg

Buffer 0.01M pH7.4 PBS

Preservative None

Storage Shipped at 4°C. Upon delivery aliquot and store at -20°C. Avoid freeze / thaw cycles.

BACKGROUND

Keywords Androstenedione; 4 androstenedione; 17 ketoestosterone; Androstanedione 3;
