

Flavomycin [KLH] (DAGA-191K)

This product is for research use only and is not intended for diagnostic use.

PRODUCT INFORMATION

Antigen Description	Flavomycin (bambermycins) is a performance enhancing antibiotic intended and available solely for use in animal nutrition. Its mechanism of action is to inhibit the synthesis of the bacterial wall. Flavomycin is predominately effective against gram-positive pathogenic bacteria. However, it does not have significant action against Lactobacillus, Bifidobacterium, and other protective bacteria.
Conjugate	KLH
Applications	Immunogen
Format	Liquid
Concentration	Batch dependent - please inquire should you have specific requirements.
Size	1 mg
Buffer	0.01M pH7.4 PBS
Preservative	None
Storage	Shipped at 4°C. Upon delivery aliquot and store at -20°C. Avoid freeze / thaw cycles.

BACKGROUND

Keywords Bambermycin; flavofosfolipol; flavophospholipol; moenomycin; Gainpro; Flavomycin
