

Oropouche virus Nucleocapsid (aa 1-231) [His] (DAGA-2014)

This product is for research use only and is not intended for diagnostic use.

PRODUCT INFORMATION

Product Overview	C-terminal 6xHis tagged N (Oropouche virus) (GenBank #AJT39491, aa 1-231)
Antigen Description	Oropouche virus (OROV) is an emerging arthropod-transmitted orthobunyavirus that causes episodic outbreaks of a debilitating febrile illness in humans in countries of South and Central America. The continued expansion of the range and number of its arthropod vectors increases the likelihood that OROV will spread into new regions.
Species	OROV
Purity	> 90% as determined by SDS-PAGE
Conjugate	His
Applications	WB standard, antibody ELISA, immunogen, etc. For research use only, not for use in diagnostic procedures.
Format	Liquid
Concentration	Batch dependent - please inquire should you have specific requirements
Buffer	PBS; 8M Urea.
Preservative	None
Storage	Keep it at 4°C if used within a month. For long term storage, split it into small aliquots and keep at -80°C. Avoid repeated freezing and thawing. The product will be expired one year after receiving if stored properly. Non-hazardous. No MSDS required.
