

Zopiclone [KLH] (DAGA-346K)

This product is for research use only and is not intended for diagnostic use.

PRODUCT INFORMATION

Antigen Description Zopiclone (brand name Imovane in Canada, Australia and Zimovane in the UK) is a non-benzodiazepine hypnotic (a cyclopyrrolone, which increases the normal transmission of the signal substance GABA in the central nerve system, as benzodiazepines do, however in a rather different way) agent used in the treatment of insomnia. In the United States, zopiclone is not commercially available, although its active stereoisomer, eszopiclone, is sold under the name Lunesta (see History). Zopiclone is a controlled substance in the United States, Japan, Brazil and some European countries, and may be illegal to possess without a prescription.

Conjugate	KLH
Applications	Immunogen
Format	Liquid
Concentration	Batch dependent - please inquire should you have specific requirements.
Size	1 mg
Buffer	0.01M pH7.4 PBS
Preservative	None
Storage	Shipped at 4°C. Upon delivery aliquot and store at -20°C. Avoid freeze / thaw cycles.

BACKGROUND

Keywords Z-drug; Zopiclone
