

Recombinant fatty acid binding protein (90%) (DAGA-850)

This product is for research use only and is not intended for diagnostic use.

PRODUCT INFORMATION

Antigen Description	The fatty-acid-binding proteins (FABPs) are a family of transport proteins for fatty acids and other lipophilic substances such as eicosanoids and retinoids. These proteins are thought to facilitate the transfer of fatty acids between extra- and intracellular membranes. Some family members are also believed to transport lipophilic molecules from outer cell membrane to certain intracellular receptors such as PPAR. Levels of fatty-acid-binding protein have been shown to decline with ageing in the mouse brain, possibly contributing to age-associated decline in synaptic activity.
----------------------------	--

Purity	>90% by SDS-PAGE
Conjugate	TBD
Format	Liquid
Concentration	Batch dependent - please inquire should you have specific requirements
Buffer	50 mM phosphate borate buffer, pH 8.0
Preservative	None
Storage	-20°C

BACKGROUND

Keywords	Fatty acid-binding protein;FABPs;muscle and heart;H-FABP
