

Glycogen phosphorylase BB (>98%) (DAGA-854)

This product is for research use only and is not intended for diagnostic use.

PRODUCT INFORMATION

Antigen Description	GPBB is a sensitive marker for the acute myocardial infarction (AMI) diagnosis within 4 hours after the onset of chest pain. It has also been shown that GPBB is increased in a considerable proportion of AMI patients within 2-3 hours from onset of chest pain. Level of GPBB is increased early in patients with unstable angina. GPBB can also be a sensitive marker for the detection of perioperative myocardial ischaemia and infarction in patients undergoing coronary artery bypass grafting.
Purity	>98% by SDS-PAGE
Conjugate	Unconjugated
Applications	User optimized
Format	Liquid
Concentration	Batch dependent - please inquire should you have specific requirements
Size	100 µg
Buffer	1 mM beta-glycerophosphate, 1mM EDTA, 15 mM ME, 0.5M NaCl, pH 7.8, and 50 % glycerol.
Preservative	None
Storage	Aliquot and store at -20°C. Avoid repeated Freeze/Thaw cycles

BACKGROUND

Keywords GP-BB Protein;Glycogen phosphorylase isoenzyme BB Protein
