

Human tropomyosin antigen (Controls,>95%) (DAGA-927)

This product is for research use only and is not intended for diagnostic use.

PRODUCT INFORMATION

Antigen Description	Tropomyosin is a two-stranded alpha-helical coiled coil protein found in cell cytoskeletons. Many studies have shown that there are Specific changes to the repertoire of tropomyosins expressed in cells that are undergoing cellular transformation. These highly reproducible results suggest that, during the process of cellular transformation, a process whereby a normal cell becomes malignant, there is a decreased synthesis of HMW tropomyosin isoforms.
Purity	>95% by SDS-PAGE
Conjugate	Unconjugated
Applications	Controls, Calibrators & Standards Immunoassays Testing/Assay Validation Life Science ELISA, Blotting, Etc.
Format	Lyophilized
Concentration	Batch dependent - please inquire should you have specific requirements
Size	25 µg
Buffer	5 mM ammonium bicarbonate
Preservative	None
Storage	-20°C

BACKGROUND

Keywords Tropomyosin; Tropomyosin protein
