

Native Cytomegalovirus (Strain Towne) Antigen (DAGC078)

This product is for research use only and is not intended for diagnostic use.

PRODUCT INFORMATION

| | |
|------------------|--|
| Product Overview | Infected cells are harvested, washed and virus extracted by alkaline treatment and sonication. |
| Species | CMV |
| Conjugate | Unconjugated |
| Format | Liquid |
| Concentration | mg/ml by Bradford (Biorad) assay using BSA as standard |
| Buffer | 100mM glycine buffer, pH 9.5 |
| Preservative | None |
| Storage | Frozen (-70°C). Sonicate before use. Avoid repeated freezing and thawing |

BACKGROUND

| | |
|--------------|---|
| Introduction | Cytomegalovirus is a member of the herpes virus group, which includes herpes simplex virus types 1 and 2, varicella zoster virus (which causes chicken pox), and Epstein–Barr virus (which causes infectious mononucleosis). These viruses share a characteristic ability to remain dormant within the body over a long period. |
| Keywords | CMV; Cytomegalovirus |
