

Avian Leukosis Virus Subgroup J (Hc-1) Tissue Culture (DAGC532)

This product is for research use only and is not intended for diagnostic use.

PRODUCT INFORMATION

Species	ALV
Conjugate	N/A
Applications	Can be used for applications such as agar gel immunodiffusion, HI, VN, SN and many others.
Format	Liquid
Size	1 ml
Preservative	None
Storage	Store at -80°C

BACKGROUND

Introduction	Avian leukosis virus (ALV) infects mainly chickens but can also infect pheasants, partridges and quail. It belongs to the Alpharetrovirus genus of the family Retroviridae. It is divided into subgroups A, B, C, D, E and J, depending on their viral envelope proteins which determine immune response and host range. The ALV envelope encases a capsid and a single stranded RNA genome.
Keywords	Avian Leukosis Virus; ALV; Avian Leukosis
