

# Chicken Anemia Virus (CL-1) Tissue Culture (DAGC539)

This product is for research use only and is not intended for diagnostic use.

## PRODUCT INFORMATION

<b>Species</b>	CAV
<b>Conjugate</b>	Unconjugated
<b>Applications</b>	Can be used for applications such as agar gel immunodiffusion, HI, VN, SN and many others.
<b>Format</b>	Tissue Culture
<b>Size</b>	1 ml
<b>Preservative</b>	None
<b>Storage</b>	Store at -20°C.

## BACKGROUND

<b>Introduction</b>	Chicken anemia virus, or CAV, is currently a member of the Anelloviridae family which is found worldwide. The virus only affects chickens. CAV is a non-enveloped icosahedral single stranded DNA virus, which causes bone marrow atrophy, anemia, and severe immunosuppression. Clinical signs of CAV infection are predominantly found in young chicks due to vertical transmission from the breeder hens whose maternal antibodies have not yet formed following exposure.
