

Mouse/Rat Secretoneurin ELISA Kit

This product is for research use only and is not intended for diagnostic use.

For illustrative purposes only. To perform the assay the instructions for use provided with the kit have to be used.

PRODUCT INFORMATION

Intended Use

The mouse/rat Secretoneurin EIA Kit is a competitive immunoassay for in vitro quantitative measurement of Secretoneurin in mouse, rat serum or plasma.

Reagents And Materials Provided

- 1. EIA buffer concentrate
- 2. 96-well immunoplate with acetate plate sealer
- 3. Anti serum (lyophilized powder)
- 4. Standard (1 ug lyophilized powder)
- 5. Biotinylated tracer (lyophilized powder)
- 6. Sreptavidin-HRP
- 7. TMB substrate solution
- 8. Stop solution
- 9. Standard diluent 8ml
- 10. Datasheet
- 11. Protocol

Materials Required But Not Supplied

- 96-well microtiter plate reader set up to measure 450 nm and 650 nm
- 96-well plate washer and shaker (optional)
- Sterile deionized or USP water
- Curve fitting software (optional)
- Test tubes, pipettes and various other standard laboratory items

Storage

Lyophilized components and standard diluent at a constant -20°C, The remaining components should be stored in the refrigerator (2-4°C)

Specimen Collection And Preparation

1. Sample extraction. Sample extraction is recommended especially for serum samples. It may not be as important for some tissue culture samples. The kit may still be used without extraction but this may cause unexpected results due to the possible binding between serum proteins and kit components. If you purchased an Extraction-Free Kit (EIAS) you may use it for the measurement of human, rat, or mouse serum or plasma (according to its designation) without performing an extraction.

Email: info@creative-diagnostics.com

2. Sample concentration. The concentration of the target molecule must be within the measuring range of the kit (in a region around the IC50). If you cannot estimate the concentration range of your sample you can prepare it at different concentrations such that one of the samples may be within the measuring range.

Typical Standard Curve

Suggested Preparation of Standards							
	ng/ml		Range:	0.02	to	25	ng/ml
Stock	1000						
S1	25.00	Add	25 µl	stock	+	975	μl diluent
S2	6.25	Add	100 µl	S1	+	300	μl diluent
S3	1.56	Add	100 µl	S2	+	300	μl diluent
S4	0.39	Add	100 µl	S3	+	300	μl diluent
S5	0.10	Add	100 µl	S4	+	300	μl diluent
S6	0.02	Add	100 µl	S5	+	300	μl diluent
S0	0.00					300	μl diluent

Performance Characteristics

AVERAGE IC50: 3.5 ng/ml

Detection Range

0-25 ng/ml

Specificity

Secretoneurin (mouse, rat): 100%

Catestatin: 0

WE-14: 0

Pancreastatin (porcine): 0
