BACKGROUND

Introduction

AMBP (Alpha-1-Microglobulin/Bikunin Precursor) is a Protein Coding gene. Diseases associated with AMBP include Hepatitis E and Obstructive Nephropathy. Among its related pathways are Binding and Uptake of Ligands by Scavenger Receptors and Vesicle-mediated transport. Gene Ontology (GO) annotations related to this gene include protein homodimerization activity and serine-type endopeptidase inhibitor activity. An important paralog of this gene is WFIKKN2.
