

Anti-Hemoglobin monoclonal antibody, clone C842M (DMAB1536MH)

This product is for research use only and is not intended for diagnostic use.

PRODUCT INFORMATION

Specificity	Recognizes Hemoglobin
Immunogen	Human hemoglobin
Isotype	IgG1
Source/Host	Mouse
Species Reactivity	Human
Clone	C842M
Affinity Constant	Not determined
Purification	Protein G chromatography
Conjugate	Unconjugated
Applications	Suggested pair for testing (Capture - Detection): DMAB1536MH - DMAB1537MH
Concentration	3.85mg/ml
Size	1 mg
Buffer	PBS
Preservative	0.1% Sodium Azide
Storage	Store at 2–8°C.

BACKGROUND

Introduction

Hemoglobin also rendered as haemoglobin and abbreviated Hb or Hgb) is the iron-containing oxygen-transport metalloprotein in the red blood cells of all vertebrates, with the exception of the fish family Channichthyidae, as well as the tissues of some invertebrates. Hemoglobin in the blood carries oxygen from the respiratory organs (lungs or gills) to the rest of the body (i.e. the tissues) where it releases the oxygen to burn nutrients to provide energy to power the functions of the organism, and collects the resultant carbon dioxide to bring it back to the respiratory organs to be dispensed from the organism.
