

Anti-HBV Surface Antigen Monoclonal antibody, Clone C119M (DMAB3527)

This product is for research use only and is not intended for diagnostic use.

PRODUCT INFORMATION

Specificity	Recognizes Hepatitis B surface antigen, subtypes ad & ay. Does not cross-react with normal human serum
Target	HBV Surface Antigen
Immunogen	Purified HBsAg
Isotype	IgG2a
Source/Host	Mouse
Species Reactivity	HBV
Clone	C119M
Affinity Constant	Not determined
Purification	90% pure. Protein A chromatography
Conjugate	Unconjugated
Applications	<p>Suitable for use in ELISA. Each laboratory should determine an optimum working titer for use in its particular application. Other applications have not been tested but use in such assays should not necessarily be excluded.</p> <p>Recommended pairs for sandwich immunoassay:</p> <ul style="list-style-type: none">• Capture DMAB3527 DMAB3527• Detection

[DMAB3529](#)

[DPAB0227](#)

Suggested pair for testing (Capture - Detection): DMAB3527 - [DPAB0227](#)

Format	Purified, Liquid
Concentration	Lot specific (OD280nm, E0.1%= 1.3)
Size	1 mg
Buffer	0.01M PBS, pH 7.2. Product contains no stabilizing protein.
Preservative	0.1% Sodium Azide
Storage	Upon receipt, store at -20°C. Avoid multiple freeze/thaw cycles.

BACKGROUND

Introduction	Hepatitis B Virus (HBV) infection induces a disease state characterised by liver damage, inflammation and viral persistence. Infection also increases the risk of hepatocellular carcinoma. HBV belongs to the Hepadnaviridae family of viruses. Its genome consists of partially double stranded circular DNA. The DNA is enclosed in a nucleocapsid, or core antigen (HBcAg), which is surrounded by a spherical envelope (surface antigen or HBsAg). The core antigen shares its sequences with the e antigen (HBeAg) but no cross reactivity between the two proteins has been observed. The HBV genome also encodes a DNA polymerase that also acts as a reverse transcriptase.
