

# Human Anti-EBV EA IgG Control Serum (DPAB-CS24022G)

This product is for research use only and is not intended for diagnostic use.

## PRODUCT INFORMATION

|                    |                 |
|--------------------|-----------------|
| Specificity        | EBV EA          |
| Target             | EBV EA          |
| Isotype            | IgG             |
| Source/Host        | Human           |
| Species Reactivity | EBV             |
| Conjugate          | unconjugated    |
| Applications       | ELISA           |
| Format             | Liquid          |
| Size               | 3 ml            |
| Buffer             | Serum           |
| Preservative       | None            |
| Storage            | Store at 2-8°C. |

## BACKGROUND

|              |   |
|--------------|---|
| Introduction | The Epstein–Barr Virus, also called Human Herpesvirus 4 (HHV-4), is one of eight known human herpesvirus types and is one of the most common viruses in humans. Antibodies to several antigen complexes may be measured for detection of Epstein-Bar virus. These antigens are the viral capsid antigen (VCA), the early antigen (EA) and the EBV nuclear antigen (EBNA). |
